## 1. Introduction

The I-7567 is a USB to HART converter specially designed as the master device of HART protocol. It allows users to access the HART slave via virtual COM-port of PC and the baud rate must be set 1200 bps.

When connecting I-7567 to PC, PC will load the relevant device driver automatically (hot plug & play). Therefore, users can make data collection and processing of HART network easier and quicker by applying I-7567. In addition, by using the I-7567 utility, users can configure module and test HART communication easily.

The following is the application structure of the USB/HART modules.

#### 1.1 Features

- Support HART Short/Long frame
- Support HART Burst mode.

- Support point-to-point or multi-drop HART mode.
- Support connecting up to 15 HART slave devices.
- Allow two HART masters.
- Provide utility tool for module configuration and HART communication.
- No external power supply (powered by USB)
- Support firmware update via USB
- Provide PWR / Tx / Rx indication LED
- 4KV ESD Protection
- Selectable 250Ω load resistor (1/4W)

#### 1.2 Specifications

#### [USB Spec.]

- Input port : USB (USB Type B)
- Compatibility : USB 1.1 and 2.0 standard
- Driver Supported : Windows 2000 / XP / Vista / 7 (32/64 bit)
- Virtual COM Parameter : **1200** bps, **O**(odd parity), **8**(data bit), **1**(stop bit)

#### [HART Spec.]

- Channel:1
- Connector : 2-pin screwed terminal-block
- Network : Point to Point or Multi-drop
- Baud Rate : 1200 bps
- Frame : Short or Long
- Operates as a HART Master and supports all HART commands
- Support up to 15 HART slave devices
- Isolation Voltage : 3KVdc on the HART side

#### [ Module Spec. ]

- Dimensions : 108mm x 72mm x 35mm (H x W x D)
- Operating temperature : -25 to 75°C (-13 to 167°F);
- Storage temperature : -30 to 75°C (-22 to 167°F);
- Humidity: 5 to 95%, non-condensing;
- Indication LEDs : <u>PWR LED</u> : Module power status

## Tx LED: Data received from USBRx LED: Data received from HART port

#### [Utility Tool]

- Provide module configuration and HART communication easily and quickly.
- Provide HART devices search automatically.
- Provide diagnostic Information of HART device.
- Provide data logging for HART communication.

#### [Application]

- Current Measuring;
- Petrochemical Industry Application;
- Environment Monitoring;
- Tunnel Monitoring;
- Monitor system;
- Building Monitoring etc.;

## 2. Hardware

Figure 2-1: Hardware externals of I-7567

#### 2.1 Block Diagram

Figure 2-2 is a block diagram illustrating the functions on the I-7567 module. It provides the 3000Vrms Isolation in the HART interface site.

Figure 2-2: Block diagram of I-7567

## 2.2 Pin Assignment of HART Port

Figure 2-3: Pin Assignment on I-7567

#### 2.2.1 Pin Function Description

Pin No.	Pin Name	Pin Function Description
1	-	N/A
2	-	N/A
3	-	N/A
4	HART+	HART+
5	-	N/A
6	-	N/A
7	HART-	HART-
8	-	N/A
9	-	N/A
10	-	N/A

#### 2.2.2 HART Connection

The HART connection can be divided to the following two types :

- (1) "Loop Power Source" Mode.
- (2) "External Power Source" Mode.

Ex2 : Loop Power Source (External Resistance)

Ex3 : Loop Power Source (External Resistance)

Ex4 : External Power Source (Internal Resistance)

#### 2.3 Terminator Resistor Settings

The DIP switch is used to provide HART network with 250  $\Omega$  (1/4 W) resistor. When it is set to "On", the resistor will connect to HART network. Otherwise, it will disconnect the resistor from HART network. The default position of the DIP switch is in "On".

Figure 2-5: Enable Internal Resistor. Figure 2-6: Disable Internal Resistor.

#### 2.4 Init / Normal Jumper

Open the shell of I-7567 and there is a jumper (JP1) on the PCB of I-7567 is used for <u>firmware operation</u> or <u>firmware updating</u> function of I-7567 module.

Figure 2-7: Firmware Operation

Figure 2-8: Firmware Updating

#### 2.4.1 Firmware Update Mode

Please follow the below steps to complete the firmware update process of I-7567.

(1) Set the jumper (JP1) to the firmware updating position like Figure 2-8 and reboot I-7567. Then I-7567 will work in the "<u>Firmware Update</u> <u>Mode</u>". In this mode, users can update the firmware of I-7567 module via USB and the I-7567 will become a "USB Mass Storage" device like Figure 2-9.

🤝 USB UPDATE (G:)

Firmware Update Success ! Please Reboot Module !
Firmware Update
Exit

#### 2.4.2 Firmware Operation Mode

In operation mode, users need to set the jumper (JP1) to the firmware operation position like Figure 2-7 and reboot I-7567. In this mode, users

can send / receive HART frame via USB port of PC.

#### 2.5 LED Indication

There are three LEDs provided to indicate what situation the I-7567 is in. The Figure 2-10 is the illustration of these three LEDs.

Figure 2-10: LED position of I-7567

## 2.5.1 LED function

#### (1) PWR LED :

When power on I-7567, if I-7567 is in the firmware operation mode, then the PWR LED will be on permanently. If I-7567 is in the firmware update mode, then all the LED will be off.

#### (2) Tx LED :

When I-7567 received the data from USB, then the Tx LED will flash until the data transmission completed.

#### (3) Rx LED :

When I-7567 received the HART frame from HART device, then the Rx LED will flash until the data transmission completed.

|--|

LED Namo	Power	No	FW	FW	USB Port	HART Port
	off	Driver	Update	Operation	Data Received	Data Received
<b>PWR LED</b>	off	flash	off	on	on	on
Tx LED	off	flash	off	off	flash	off
Rx LED	off	flash	off	off	off	flash

#### 2.6 Cable Selection

The HART bus is a balanced (differential) 2-wire interface running over a Shielded Twisted Pair (STP), Un-shielded Twisted Pair (UTP), or Ribbon cable. How to decide a cable type, cable length, and terminator in the HART bus network, please refer to the following table.

No. Network Devices	Cable Capacitance – pf/ft (pf/m)					
	20 pf/ft	30 pf/ft	50 pf/ft	70 pf/ft		
	(65 pf/m)	(95 pf/m)	(160 pf/m)	(225 pf/m)		
1	9,000 ft	6,500 ft	4,200 ft	3,200 ft		
	(2,769 m)	(2,000 m)	(1,292 m)	(985 m)		
5	8,000 ft	5,900 ft	3,700 ft	2,900 ft		
	(2,462 m)	(1,815 m)	(1,138 m)	(892 m)		
10	7,000 ft	5,200 ft	3,300 ft	2,500 ft		
	(2,154 m)	(1,600 m)	(1,015 m)	(769 m)		
15	6,000 ft	4,600 ft	2,900 ft	2,300 ft		
	(1,846 m)	(1,415 m)	(892 m)	(708 m)		

Allowable cable lengths for 1.0 mm (#18 AWG) shield twisted pair

Note: The AWG means a standard method used to measure wire. The numbering system works backwards from what people would think, the thicker (heavier) the wire, the lower the number.

## 3. Driver Installation

This section will show how to install the I-7567 USB/HART converter device driver under Windows 2000/XP and Win7. Users can download the I-7567 device driver from ICP DAS web site:

ftp://ftp.icpdas.com/pub/cd/fieldbus\_cd/hart/converter/i-7567/usb\_driver/

### 3.1 Install I-7567 Driver Automatically

#### [ Step - 1 ]

Plug-in the I-7567 to PC first and Windows will detect the new device and shows the "<u>Found New Hardware Wizard</u>" screen prompting you to install the driver for the detected USB Device. Please click "Cancel" button to cancel driver installation by manual like Figure 3-1.

Figure 3-1: New Hardware Wizard (1)

#### [ Step - 2 ]

Execute "**icpusbconverter\_drvinst\_v1.2.exe**" file to install driver automatically and then click "Continue Anyway" button like Figure 3-2. After driver installation process finished, it will show the screen like Figure 3-3.

Figure 3-3: Install I-7567 Driver Finished

#### 3.2 Install I-7567 Driver by Manual (Windows x86 Platform)

#### [ Step - 1 ]

Please execute "icpusbconverter\_drvinst\_v1.4.exe" file first to install necessary driver files of I-7567 to system.

#### [ Step - 2 ]

Plug in the I-7567 to PC and Windows will detect the new device and shows the "Found New Hardware Wizard" screen prompting you to install the driver for the detected USB Device. Please select "No, not this time" option and click "Next" button like Figure 3-4.

Figure 3-4: New Hardware Wizard (1)

#### [ Step - 3 ]

Please select "install from a list or specific location (Advanced)" option and click "Next" button like Figure 3-5.

Figure 3-5: New Hardware Wizard (2)

#### [ Step - 4 ]

Please select "Search for the best driver in these locations" option and check "include this location in the search:" checkbox and click "Browser" button to assign the I-7567 driver location - <u>C:\WINDOWS\inf\</u> and then click "Next" button like Figure 3-6.

Figure 3-6: New Hardware Wizard (3)

#### [ Step - 5 ]

Please click "Continue Anyway" button like Figure 3-7.

Figure 3-7: New Hardware Wizard (4)

#### [ Step - 6 ]

Please click "Finish" button to complete I-7567 device driver installation like Figure 3-8.

Figure 3-8: New Hardware Wizard (5)

#### 3.3 Install I-7567 Driver by Manual (Windows x64 Platform)

	x
G Update Driver Software - ICPDAS I-7567 USB2HART (COM30)	
Browse for driver software on your computer	
Search for driver software in this location:

Next Can	cel

[ Assign the I-7567 driver to the "I-7565-H1H2\_DrvFile\_v1.4" folder ]

#### 3.4 Verify Driver Installation

This section will show how to verify whether the driver of I-7567 was properly installed. If the driver is installed successfully, then there will be a "Virtual COM Port" assigned by Windows. Please follow the below steps to check it.

Click "Start"  $\rightarrow$  "Settings"  $\rightarrow$  "Control Panel" and then double click on the "System" icon. Once the "System Properties" screen displayed, click on "Hardware" tab and then click on the "Device Manager" button. Double-click on Ports (COM & LPT) item. If the device driver was correctly installed, users can find the "<u>ICPDAS I-7567 USB2HART</u>" device listing and the "Virtual COM Port" number that Windows has assigned to the device is **COM3** like Figure 3-9.

Figure 3-9: Virtual COM Port Number

#### 3.5 Uninstall I-7567 Driver

Please follow the below steps to uninstall I-7567 device driver.

#### [ Step - 1 ]

Click "Start"  $\rightarrow$  "Settings"  $\rightarrow$  "Control Panel" and then double click on the "System" icon. Once the "System Properties" screen displayed, click on " Hardware" tab and then click on the "Device Manager" button. Double-click on Ports (COM & LPT) item. Please find the "ICPDAS I-7567 USB2HART" device listing and click the right button on the mouse and choose "Uninstall" item like Figure 3-10.

Figure 3-10: Uninstall I-7567 Driver (1)

#### [ Step - 2 ]

Click "**OK**" button to complete I-7567 device driver un-installation like Figure 3-11. After that, the "<u>ICPDAS I-7567 USB2HART</u>" device listing will disappear on **Ports (COM & LPT)** item.

Figure 3-11: Uninstall I-7567 Driver (2)

## 3.6 Install I-7567 Driver in Windows10

Please follow the below steps.

1. Click the right button of mouse on the [I-7567 USB2HART] option and choose [Update Driver Software ...].

#### 2. Click the [Browse my computer for driver software] option.

×

$\rightarrow$	Search automatically for updated driver software
	for your device, unless you've disabled this feature in your device installation settings.
$\rightarrow$	Browse my computer for driver software
	Locate and install driver software manually.

3. Click the [Let me pick from a list of device drivers on my computer] option.

	✓ Browse
✔ In	clude subfolders

## 4. HC\_Tool Utility

HC\_Tool utility is provided to configure ICP DAS all HART converter modules (like I-7567 / I-7570) or transmit / receive HART frame for HART communication easily and quickly. HC\_Tool utility can be downloaded from the ICP DAS web site :

http://ftp.icpdas.com/pub/cd/fieldbus\_cd/hart/converter/i-7567/software/.

#### 4.1 Run Utility

Run the "**HC\_Tool**", like Figure 4-1. If users can't run "HC\_Tool", please install .NET Framework 3.5 first.

(http://www.microsoft.com/downloads/details.aspx?familyid=333325FDAE 52-4E35-B531-508D977D32A6&displaylang=en ).

		Manufacturer ID : 62 Device type : 1	
		Device ID: 250205	
		OK Cancel	

Figure 4-2: Set Serial Port No.

(2) If using I-7570 module, please check "I-7570" item and select the communication parameters of PC serial port. Note, the settings of the communication parameters must be the same with those in I-7570.

#### 4.2.2 HART Frame Settings

The following is the description of HART command fields.

Auto Configure : (1) Enable : search HART devices automatically.

(2) Disable : search HART devices according to manual parameters.

Frame type	: Select HART frame format (Short/Long).
Master type	: Select Primary master or Secondary master.
Preambles	: Select 5~20 bytes (0xFF) number.
Address	: Select HART Polling Address (0~15).
Manufacturer	ID: Manufacturer Identification Code
Device type	: Manufacturer Device Type Code
Device ID	: Manufacturer Device Identification Code.

Figure 4-3: Set HART Frame Format

#### 4.3 Search HART devices

4.3.1 Search HART devices automatically

Set the option of "Auto Configure" field to be "Enable" and the option of "Master type" field to be "Secondary" like Figure 4-4. Then HC\_Tool utility will automatically search all HART devices by using HART short frame with "Secondary Master" identity.

Settings

## 4.6 HART Configuration (HTCfg)

When HART devices are searched in HC\_Tool, then users can use "**HTCfg**" function to configure HART devices like Figure 4-14. (Supported by HC\_Tool v1.02 or newer)

HC_Tool v1.02 (ICP DAS)	
Settings Data Log SRMsg HTCfg ModCfg About	
COM6 : Open Close Search : Start Stop	
Status : Idle	
Information :	
[Polling Address : 0] Manufacturer ID Code : 22 (0x16) => Hartmann & Braun (ABB) Manufacturer Device Type Code : 133 (0x85) => AS800 (Pressure) Number of Preambles Required : 7 Universal Command Revision : 5 Device-Specific Command Revision : 2 Software Revision : 11 Hardware Revision : 8 Device Function Flags : 2 Device ID Number : 723522 (0x0B0A42) Unique Address : 0x16850B0A42	
[Polling Address : 1] Manufacturer ID Code : 20 (0x14) => Invensys/Foxboro Manufacturer Device Type Code : 46 (0x2E) => I/A Pressure/IA Series (Pressure) Number of Preambles Required : 5 Universal Command Revision : 5 Device-Specific Command Revision : 1 Software Revision : 32 Device Function Flags : 1 Device ID Number : 8659467 (0x84220B) Unique Address : 0x142E84220B	

Figure 4-14: HTCfg Item

The following is the function description of "HTCfg" screen. (Like Figure 4-15)

(1) "DevAddr" Field: Assign the HART device for configuration.

(2) "**Response**" Field: Show the response message of HART

configuration command.

- (3) "**Universal**" Page: Choose the "Universal" command for configuration. (Support HART Command version v6.0)
- (4) "**Common**" Page: Choose the "Common-Practice" for configuration. (Support HART Command version v6.0)
- (5) "**Start**" Button: Trig to send the HART configuration command.
- (6) "Listen Mode" item: Check it and click the "Start" button, HC\_Tool will listen HART bus and show the received HART message information.
- (7) "HART RecvMsg Count" Area: Show the total count of the received HART messages. (Including Master sending message and Slave response message)

ART Commnad

#### 4.7 Module Configuration (ModCfg)

Click "**ModCfg**" item, it will show the below two options to open the module configuration screen of HART Converter like Figure 4-16.

(1) HC\_Tool : v1.02 or newer supported.

(2) I-7567 : FW\_v1.5 or newer supported.

(3) I-7570 : FW\_v1.4 or newer supported

HC_Tool	v1.02 (IC	P DAS)					
Settings	Data Log	SRMsg	HTCfg	ModCfg	About		
COM6 : Search :	Open Start	Cla Sto	p	For J	All (-7570		
Status : Idle							
Information :							

The following is the function description of "ModCfg".

#### 1. "For All" Option : (Like Figure 4-17) Note : It is used for all HART Converter modules

HC Module Info	
Config Cmd : 1 : Get Module FW Version 1 : Get Module FW Version 2 : Reset Module 3 : Get HART Send/Recv Count 4 : Reset HART Send/Recv Count	Send

Figure 4-17: "For All" Option - Configuration Screen

#### (1) "Get Module FW Version":

=> Return the firmware version of HART converter module.

(2) "Reset Module":

=> Reset HART converter module.

#### (3) "Get HART Send/Recv Count":

=> Return the total count of the sending and receiving HART messages in HART converter module.

(4) "Reset HART Send/Recv Count":

=> Reset the total count of the sending and receiving HART messages in HART converter module.

#### 2. "For I-7570" Option : (Like Figure 4-18)

Note : It is just used to I-7570 module and make sure the I-7570 must run in "Config Mode" first.

I-7570 Config				
Config Cmd : 2 : Get Serial Baudrate 1 : Set Serial Baudrate 2 : Get Serial Baudrate 3 : Get Module Info 4 : Reset Module (SWWDT) 5 : Reset Module (HWWDT)	Send			
[Note : Make sure I-7570 in "Config Mode" first !! ]				

Figure 4-18: "For I-7570" Option - Configuration Screen

#### (1) "Set Serial Baudrate":

=> Set the baudrate parameters of the serial port in I-7570.

I-7570 Config	
Config Cmd : 1 : Set Serial Baudrate 115200 V N V 8 V 1 V	
Response :	Send
[Note : Make sure I-7570 in "Config M	ode" first ‼]

Figure 4-19: "Set Serial Baudrate" Function

(2) "Get Serial Baudrate":

=> Get the baudrate parameters of the serial port in I-7570.

(3) "Get Module Info":

=> Return the hardware information of I-7570. (Like: Firmware Version)

- (4) "Reset Modue (SWWDT)": => Reset I-7570. (Using Software WDT) •
- (5) "Reset Modue (HWWDT)":

=> Reset I-7570. (Using Hardware WDT) •

## 5. FAQ

## Q01 : How to use I-7567 to communicate with HART devices ? A01:

1. Install I-7567 "USB Driver" and it will create the virtual com port. (refer to chapter 3)

2. Run "HC\_Tool" utility to communicate with HART devices. (refer to chapter 4)

# Q02 : Does I-7567 support the API Library for HART ? A02:

No, it doesn't. If users want to develop their own program to communicate with HART devices, please refer to the below suggestion.

- (1) Familiar with HART protocol => Using HART Converter (like: I-7567 / I-7570 / I-7547) to send / receive HART command by yourself.
- (2) Unfamiliar with HART protocol => Using HART Gateway (like: HRT-710 (MB/RTU to HART) or HRT-711 (MB/TCP to HART)) and users can easily and quickly access HART device information via Modbus communication.

# Q03 : I-7567 driver installation for Windows10 ?

The detailed USB driver installation refers to the section 3.5.

# Q04 : Set HART device address by using HART converter ? A04: (2016/03/17)

Please follow the below steps.

- (1) Just connect one HART device to HART converter (like : I-7567 / I-7570 / I-7547).
- (2) Run "HC\_Tool" software.
  - [1] Open the ComPort  ${\scriptstyle \circ}$

[2] Click the "Start" button to search HART device automatically. As the below figure, the original address of the HART device is 0.

HC_Tool v1.05 (ICP DAS)	
Settings Data Log SRMsg HTCfg ModCfg About	
COM5 : Open Close Search : Start Stop Status : Idle	
[Polling Address : 0] Manufacturer ID Code : 22 (0x16) => Hartmann & Braun (ABB) Manufacturer Device Type Code : 133 (0x85) => AS800 (Pressure) Number of Preambles Required : 7 Universal Command Revision : 5 Device-Specific Command Revision : 2 Software Revision : 11 Hardware Revision : 8 Device Function Flags : 2 Device ID Number : 723522 (0x0B0A42) Unique Address : 0x16850B0A42	

[3] Click the "HTCfg" button to open HART configuration page.

[4] Choose the "HART device" for configuration. In the "Universal" page, click the "Cmd6" option and users can choose the new address of HART device

(Example : set to 1). Then click the "Start" button to set the new address.

HART Commnad
HART Device DevAddr 00 (Hartmann & Braun (ABB) - AS800) 00 (Hartmann & Braun (ABB) - AS800) Clear
HART Command Master type : Secondary Preambles : 7 Period (ms) : 0 Listen_Mode Response : Start
Universal Common Specific Universal Cmd : 06 : Write Polling Address
Cmd1 Cmd2 Cmd3 Cmd6 Cmd7 Cmd8 Cmd9 Cmd11 Cmd12 Cmd13 Cmd14 Cn <> Write Polling Address

[5] After the setting for the new address is successful, the below message will show.

[6] Click the "Start" button in the main page to search HART device again. Then the address of the HART device will be 1 as the below figure.

HC_Tool v1.05 (ICP DAS)	
Settings Data Log SRMsg HTCfg ModCfg About	
COM5 : Open Close Search : Start Stop Status : Idle Information : [Polling Address : 1] Manufacturer ID Code : 22 (0x16) => Hartmann & Braun (ABB)	
Manufacturer Device Type Code : 133 (0x85) => AS800 (Pressure) Number of Preambles Required : 7 Universal Command Revision : 5 Device-Specific Command Revision : 2 Software Revision : 11 Hardware Revision : 8 Device Function Flags : 2 Device ID Number : 723522 (0x0B0A42) Unique Address : 0x16850B0A42
